

Radio Spectrum Processor 2

The RSP2 is a powerful wideband full-featured SDR which covers all frequencies from 1 kHz up to 2 GHz. This enhanced version of the popular RSP1 provides three software selectable antenna inputs, & new stability and clocking features ideally suited to industrial, scientific & educational applications. Combined with the power of SDRuno receiver software this versatile receiver can monitor up to 10 MHz of spectrum at a time. The RSP2 is available in two versions—the standard RSP2 is housed in an RF shielded robust plastic case and the RSP2pro is enclosed in a rugged black painted steel case for industrial users.
